

PreClean

Fundamentals Guide

PreClean was designed to clean prior to disinfection.

PreClean was developed as a concentrated, alkaline cleaner to power through organic soil loads on water, sewage, mold, fire and bio-hazard jobs prior to sanitizing and disinfection. Made to be compatible with all Enviroguard products.

The Problem

Cleaning and disinfection/sanitization are often confused. Surfaces must be *pre-cleaned* prior to disinfection or sanitizing per the EPA registered label for consistent and predictable results.

The Solution

On contact, PreClean penetrates, lifts and suspends soil loads like feces, soot, blood and other biological matter to provide a clean surface for effective disinfection or sanitization.

How PreClean works

PreClean works by wetting out and penetrating soil loads and the surface to lift, suspend and prevent soil load redeposition while wet.

Smells Great!

It's enhanced with the fresh-smelling essential oil blend from SorbAssist to

leave behind a truly fresh and clean environment.

Totally Built Formula

The formula is a combination of wetting agents, surfactants, anti-redeposition agents, and essential oils for pre-sanitization/disinfection cleaning of porous, semi-porous and non-porous surfaces.

Dilution Guide

The dilution of PreClean is based on the soil load level.

See the dilution chart below for starting points.

	Lower Range	Upper Range
Low Soil Load	2oz/gal	12oz/gal
Medium Soil Load	16oz/gal	32oz/gal
High Soil Load	48oz/gal	Undiluted
